Profile

Software Developer with experience building backend and full-stack solutions across healthcare, enterprise, and AI-driven products. Focused on reliable systems, API integrations, and clear technical ownership in collaborative engineering environments. Open to onsite, hybrid, and remote roles.

Strengths

Cross-functional collaboration

Ownership & accountability

Stakeholder communication

Structured problem-solving

Technical documentation

Technical Skills

</> **Core:** C#/.NET, TypeScript, JavaScript, React

</> **Also:** Python, Java, SQL, Node.js, C/C++

🔧 REST API design, integrations, authentication

☁️ Azure, Docker, CI/CD pipelines

⚙️ Git (GitLab), Jira, code reviews, Agile/Scrum

Skill Highlights

C#/.NET ★★★★★

React ★★★★★

REST APIs ★★★★★

TypeScript ★★★★★☆

Python ★★★★★☆

Languages

Danish — Native

English — Fluent

Work Style

Open to onsite, hybrid, and remote roles

Effective in both co-located and distributed teams

Work Experience

Lead Software Engineer

May 2025 – Jan 2026

LogicNodes

- Built backend foundations for a multi-tenant AI platform automating ERP workflows for multiple customers.
- Defined core backend architecture, including service boundaries, tenant isolation, and security considerations.
- Implemented ERP integrations and automation flows used in production.
- Collaborated across engineering, product, and customer-facing activities, including demos and technical discussions.

Development Consultant

May 2023 – Jun 2024

Region Nordjylland

- Developed and maintained backend services for automated clinical data reporting used in daily healthcare operations.
- Integrated external data providers via REST APIs and tested end-to-end data flows.
- Investigated and resolved production issues to improve stability and release quality.
- Contributed to documentation and knowledge sharing to support long-term maintainability.

Software Developer

Sep 2022 – Feb 2023

Rohde & Schwarz

- Migrated and restructured repositories to GitLab, improving version control and development workflows.
- Automated recurring internal processes using Python and shell scripting, reducing manual effort and errors.

Education

B.Sc. Software Engineering

2022

Aalborg University

- Analyzed GPS-based driving data and built a route-optimization web application with user feedback.

GlobalTech

2018

Aalborg Technical High School

- Built a strong technical foundation in mathematics, engineering, IT, and communication.
- Completed an international track with a semester in Australia and an internship in London focused on web design.
